CHAO PHRAYA BASIN FLOOD WATCH
Industrial risk bulletin for manufacturers and logistics providers

Bulletin CPB-26-208
Date: 17 October 2026
Severity: HIGH

FLOODING OF INDUSTRIAL ESTATES IN AYUTTHAYA

Record rainfall in the upper Chao Phraya basin has overwhelmed flood defences in Ayutthaya province. Several industrial estates were inundated overnight on 15-16 October 2026.

Electronics and component manufacturers in Ayutthaya have halted production and evacuated staff. Power to the affected estates has been cut as a safety measure.

Water levels are expected to recede slowly. Authorities estimate that drainage and clean-up will take until at least 20 November 2026 before factories can restart.

Laem Chabang Port and the industrial estates of the Eastern Seaboard are outside the flood zone and continue operating normally. Road freight from Bangkok to the port is running with minor delays.

Buyers with suppliers in Ayutthaya should confirm inventory positions and qualify alternative sources for capacitors, connectors and other electronic components.
