NEW EXPORT LICENSING FOR GRAPHITE AND RARE-EARTH PRODUCTS

Regional authorities have announced a mandatory export licensing regime covering natural and spherical graphite and separated rare-earth oxides produced in Inner Mongolia.

The regime takes effect on 1 November 2026. Exporters must obtain a licence per shipment; licence processing times have not been published, and no end date for the measure has been given.

Market participants expect shipments of graphite anode material and neodymium-praseodymium oxide from Inner Mongolia to be held at origin for several weeks while the first licences are processed.

Buyers dependent on producers in Inner Mongolia should review inventory cover and qualified alternative sources now.
