PENANG MICROCONTROLLERS SDN. BHD.

Bayan Lepas Free Industrial Zone, Penang, Malaysia

Ref: PMC-SEC-2026-031

Date: 17 October 2026

To: Automotive customers - Supply Chain and Quality contacts

CUSTOMER NOTICE: CYBERSECURITY INCIDENT AND SHIPMENT SUSPENSION

On 16 October 2026 Penang Microcontrollers detected a ransomware attack affecting the manufacturing execution and order management systems at our Penang wafer-sort and assembly facility.

As a precaution we have isolated the affected systems. Production and shipment of automotive 32-bit microcontrollers from the Penang site are suspended while forensic investigation and system restoration continue.

Based on current progress we expect to restore order processing and resume shipments on or around 10 November 2026. Lots already in transit are not affected.

Our final test facility in Kedah runs on separate infrastructure and continues to operate normally. We have found no evidence that customer data was exfiltrated.

We will issue updates every 48 hours. Please contact your account manager to review open orders and allocation.

R. Lim, Chief Information Security Officer
